FORTER

Fraud Director

Director of Fraud; Director of Risk; Head of Fraud; Director of Trust & Safety

JOBS TO BE DONE

PROFESSIONAL

- **Stop Fraud, Not Customers**: I need to maintain a clear view of why every order is approved or declined. My goal is to eliminate friction for legitimate customers while keeping fraud rates and chargebacks low.

- **Protect Margins and Inventory from Abuse**: I need to identify and stop people from exploiting our policies to protect the customer experience. I want to see exactly where these gaps are in our lifecycle, from item-not-received claims to promotions, so I can support digital and marketing teams as they launch new experiences.

- **Recover Revenue from Disputes and Chargebacks**: I need to simplify and recover more revenue from our disputes and chargebacks. I need to understand why we lost a dispute and make the necessary updates to our process to protect more revenue.

PERSONAL

- **Strategic Partner to Grow**: I want to be seen as a business partner who helps the company grow - by decreasing chargebacks, increasing approvals, and supporting new customer experiences - not the person who just says no to marketing and sales.

- **Protect My Work**: I am very proud of the system that I've built, and I'm looking for a vendor that will enhance (not rip out) my work. For example, if I implemented Adyen Revenue Protect, I will be more likely to shut down the conversation if it's focused on how that was a mistake, and less likely if the conversation is about how Forter complements it to solve my specific abuse problems

- **Protect My Time**: I need to stop firefighting fraud attacks on nights and weekends. I need to trust our fraud vendor so I can step away from my laptop without worrying about a sudden spike in losses.

VALUE

One Sentence Pitch

Forter works with companies, like Nike, ASOS, and eBay, to stop fraudsters and abusers, without slowing down revenue from legitimate customers and their agents.

HIGH PRESSURE INDICATORS

What to look for in an opportunity that may indicate an urgency to change?

FINANCIALS

- Covered fraud model
- High chargebacks, especially if approaching card network thresholds (0.9% to 1% ratio of monthly disputes to transactions)
- Chargeback win rates below 15%
- 3DS % higher than 10% in non-regulated markets; higher than 15% in regulated markets
- Sudden influx of card testing, usually characterized by high "normalized" approval rates but low actual rates

TECH / TIMING

- Currently post-auth with risk decision
- Looking to generate a new improved customer experience, such as instant refund
- Looking to support agentic commerce flows
- Expanding to a new region or vertical
- Planning a platform migration (e.g., Shopify/Salesforce): If a merchant is already planning platform migrations, creating ideal implementation timing without additional disruption.

OPERATIONS

- Growing manual fraud review queues
- Growing manual disputing queues
- Customer service flooded with calls on returns or item-not-received claims

IMPACT: WHY ACT NOW?

The Case for Immediate Action

AGENTIC COMMERCE	With the rise of agentic shopping, fraud teams need to figure out how to differentiate between good and bad actors who are shopping with agents, so as not to block legitimate orders.
AI-GENERATED FRAUD AND ABUSE	Fraudsters are now using AI to improve, scale, and automate fraud and abuse. For example, in the past six months, many businesses have seen an increase in damaged product photos for fake returns. These attacks happen at a scale and speed that humans simply cannot catch.
NEW CUSTOMER EXPERIENCES	Features like instant refunds or promos are easy targets for abuse. Ensuring that you're prepared for potential abuse allows the business to offer these perks without losing money to people gaming the system.
SCALABLE OPERATIONAL EFFICIENCY	Using people to manually check every order is too slow and expensive as the business grows. Adding automation to the process lets the team handle more volume and stop complex fraud without hiring more staff.
GROWTH EXPANSION	Moving into new markets or adding payment options attracts new types of fraud. If fraud isn't taken into account before the launch, the business will be unprotected against attacks it hasn't seen before.
CARD NETWORK MONITORING PROGRAMS	Crossing fraud limits set by Visa or Mastercard leads to heavy fines and can stop a merchant from taking cards entirely.
RISING FIRST-PARTY FRAUD	First-party fraud is a major pain point because it's committed by legitimate customers, making it nearly impossible for traditional fraud tools to catch. Failing to stop first-party fraud can result in rising chargeback costs.
